Post Operative Record Sheet

Post-Operative Written Records are required for a minimum of 72 hours after the animal has had a surgical procedure. Remember: DONOT put food or water in the cage unless the animal is able to stand unassisted.

UNTIL NORMAL: Vital signs must be monitored several times daily for normal physiologic function and the animal observed for signs of post-operative pain or complications. Observations and assessments should be recorded at each monitoring period.

Date	Time	Initials	Observations and Assessments
3-08-06	*7:56 a.m.*	*JME*	*Temperature, heart rate, respiratory rate, pulse quality, capillary refill time, mm color, appearance of the incision, appetite, bowel and bladder actions, behavioral observations (depressed, lethargic, normal, active) and treatment (analgesics, antibiotics and dosages listing route of administrations)*
